of cancer risk to nonsmokers Fights Past
Others' cigaret smoke- 2nd-Hand
may not hike cancer risk Smoke Risk Study Downplays
Passive-smoking research disputed Nonsmoker Risk
Effect of smoking Non-smoker risk questioned
on others doubted New study contradicts non-

Several months ago, headlines around the world raised serious questions about it. trumpeted alarming news. A Japanese study Second, because Lawrence Garfinkel, the statistical director of the American Cancer Society who was claiming that non-smoking wives of smokers had a higher risk of lung cancer because of their husbands' tobacco smoke. That scared a lot of people and understandably so, if this claim was the last word. 17 years and nearly 200,000 people in which he indicated that "second-hand" smoke has insignificant effect on lung cancer rates in nonsmokers.

But now new headlines have appeared! First, For more information on: this important public because several apparent errors are reported to issue, write Scientific Division, The Tobacco Institute, 1875 I St., N.W., Washington, DC: 20006.
